Hydraulic Press Solutions

Hydraulic press systems designed and manufactured by Hill Engineering provide exceptional accuracy and flexibility for your applications. These press systems are available in standard configurations and custom designs, as well as self-contained die/press units, to fit a range of product needs.

HHP-Series Standard

The HHP-Series Standard hydraulic presses are a great fit for contract manufacturers or OEM's that intend to roll form or stamp a variety of products.

- 5 to 150 Ton
- 1/2" to 3" Stroke Range
- Up to 100 SPM Available
- Electronic Measuring Packages
- Barrier Guarding
- Rafted or Floor-Mounted Designs
- Stamping, Notching, Punching & Cutoff Configurations
- Stationary and Flying Die Designs

HX-Series Custom

To serve the industries needs for application-specific production processes, such as automotive reinforcements, pallet racking, and office furniture wall partitions, to name a few, Hill Engineering has developed its HX-Series of custom hydraulic systems. Whether it is a multiple-station high-speed notching system, or precision emboss, trim, and end form inline with roll forming, these custom systems are designed for the high-speed and configurable application.

Integration

All Hill Engineering presses are available as stand-alone machines. We also can provide tooling, and integrate them with your existing equipment, used machines, or provide a new turnkey system from Formtek.
